AMENDMENTS TO THE ABSTRACT

Please substitute the following paragraph for the abstract now appearing in the currently filed specification:

--~~This invention relates to a~~ A method is disclosed of secure loading of secret data from a first ~~security~~ module to a second ~~security~~ module, wherе~~in said~~ the first module includes secret data, ~~said~~ and the second module ~~including~~ includes a first non-volatile memory and a second volatile memory. The ~~present invention is characterized in that said~~ method includes ~~comprises~~ the steps of recording information including ~~comprising~~ one random data item within the first memory of the second module, sending a secret data item from the first module to the second module, which is encrypted based on the random data item, transferring the information including ~~comprising~~ the random data item from the first memory to the second memory of the second module, decrypting the ~~said~~ encrypted secret data item based on the random data item, and recording, in the second module, ~~said~~ the decrypted secret data item. In particular, the ~~invention~~ method can be applied to telephony.
